EXTREME PERFORMANCE GEAR LUBE - SAE 90

Quicksilver Extreme Performance Gear Lube was designed for outboard and sterndrive racing applications. This gear lube provides maximum protection against:
• Water intrusion – advanced emulsifiers protect gears if water enters the gear housing
•Wear – tackifiers and pressure additives improve oil film adhesion and protect against excessive wear
•Horsepower loss – prevents horsepower loss and won't break down when gears reach high temperatures

Quicksilver recommends the gear lube be changed at least once per year (prior to storage) or every 100 hours of operation. See owner's manual for specific recommendations.
Recommended for use in high-performance gearcases used in marine, powersports, and motorsports applications.

QUICKSILVER GREASES

QUICKSILVER GREASES

Quicksilver Grease Product Line Simplified

Quicksilver greases have gone through a makeover. The product line has been simplified to eliminate confusion about which grease to use in what application. The line has been reduced from six types of grease to three. Below is a summary of the consolidation:

2-4-C Marine Grease – No change
Needle Bearing Assembly Grease – Now called Assembly Grease. The formula has not changed but the packaging has. Instead of 8 oz tubes, the product now comes in 1lb tubs.
Special 101 – Replaced by 2-4-C Marine Grease
U-Joint and Gimbal Bearing Lubricant – Replaced by Extreme Grease
Anti-Corrosion Grease - Replaced by Extreme Grease
Engine Coupler/Spline Grease - Replaced by Extreme Grease

MARINE GREASE

Quicksilver 2-4-C Marine Grease with PTFE is a high quality, extremely versatile lithium-based, NLGI 2 grease that won't break down when mixed with water. It also has:
• Excellent resistance to oxidation and degradation
• Extreme pressure additives to withstand friction in a wide variety of operations and temperatures
Replaces Quicksilver Special 101 Lubricant part number 92-802865Q02

For use in the following marine applications:
• Steering systems/cable linkages
• Throttle and shift cables and linkages

INTRODUCTION

HOW TO USE PROPELLER GUIDE

- If an OEM or Michigan Wheel Corporation part number is known and a size or style change is not desired, then use the Part Number Cross Reference charts to locate the equivalent Quicksilver propeller.

  For attaching hardware information, locate the Quicksilver part number for the appropriate engine brand in the Dealer Guide and note the Hub System listed (❻ below).

- If an original part number is not known, the part number can not be found in the Part Number Interchange, or a propeller size or style change is desired, use the following procedure for selecting a propeller.

  ❶ Locate the brand of outboard or sterndrive using the table of contents.

  ❷ Locate the **Horsepower/Model** and **Year** that corresponds with the engine brand.

  ❸ Identify the **Boat Length** and **Current MPH** that most closely relates to the boat and motor combination.

  ❹ Select the propeller **Size** and **Style** that best meets performance objectives.

  The propeller **sizes** to the right of Boat Length/Current MPH are suggested for that application. Often two or more pitch sizes are listed for a given Boat Length/Current MPH. The higher the pitch, the more top speed potential but less power for acceleration. The lower the pitch, the less top speed potential but more power for acceleration. See Propeller Basics for more information on pitch selection.

  For information on propeller **styles** see the summary on the inside front cover and the Outboard Selector Guide or the Sterndrive Selector Guide Section.

  ❺ Order the propeller using the **Quicksilver Part Number**.

  ❻ Order the hub kit or special hardware as indicated.

  Unless otherwise noted: rubber bushing propellers use the standard OEM recommended attaching hardware (not supplied with propeller). For Flo-Torq II applications, order separately the appropriate hub kit indicated. See Flo-Torq II Application Charts Section.

  ❼ The **OEM Part Number** column identifies the original equipment part number that most closely matches the Quicksilver part number.

⚠ CAUTION

Engine RPM must be within the manufacturer's recommended specifications. Test any new propeller and verify RPMs are within recommended specifications at full throttle. Running outside of the recommended RPM range for a significant duration will damage engine.

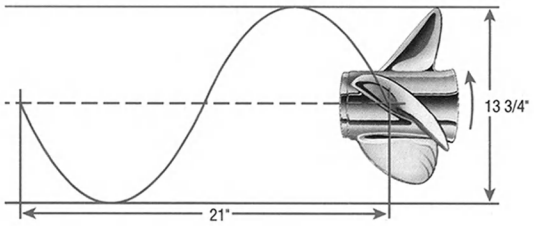
PROPELLER SELECTOR

HOW-TO-FIND THE RIGHT PROPELLER

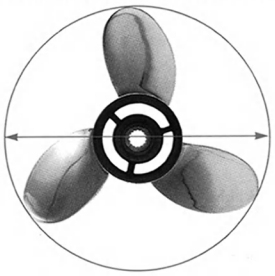
- Find the make, model, year and horsepower of the engine you are propping.
- For a Mercury or MerCruiser engine, turn to the Mercury propeller application charts in this guide and locate the table that contains propellers designed for the engine you are propping.
- Propellers for older Mercury motors can be found in the Historical Propeller charts section of the guide.
- For a non-Mercury outboard or stern drive engine, please reference the Quicksilver section of the propeller guide. Quicksilver propellers are designed to fit a wide variety of competitive applications.
- Many Quicksilver propellers require a hub kit (sold separately) to complete the installation. You can find a Quicksilver 2 step reference guide at the beginning of the propeller guide. This guide will assist you in locating the proper hub kit for your engine.

PITCH & DIAMETER

- Each propeller in this guide has a listed diameter and pitch. The diameter is the first number listed, followed by the pitch. For a 14 X 19 Propeller, this means that the propeller has a diameter of 14 inches and has 19 inches of pitch.



- Typically when selecting a propeller, you only need to select the right pitch for your boat. The correct diameter for that propeller has usually been predetermined by our engineering staff for most propellers. In general, high horsepower applications require more diameter. Propeller diameter typically decreases as pitch increases within a given propeller line.



- The diameter of the propeller is defined as the distance across the imaginary circle that is made as the propeller rotates.
- The pitch of a propeller is the theoretical distance in inches that a propeller would move forward in one revolution. The higher the pitch an engine can turn, the faster the boat will go.

DETERMINING THE CORRECT PITCH

- Consult the owner's manual to find the recommended full throttle (W.O.T.) RPM range for your engine.
- Run the boat with moderate load in an open stretch of water at W.O.T trimming the engine up for speed. Record the maximum RPM during the run. Repeat the run in the opposite direction to compensate for wind and current. The average of these two numbers is your W.O.T. RPM.
- The best compromise of acceleration, top speed and fuel economy can be obtained when the W.O.T. RPM is in the middle of the manufacturers suggested RPM range.
- An over propped boat will cause the engine to lug, with the engine unable to reach the suggested W.O.T. RPM range. An over propped boat may also exhibit sluggish acceleration and poor hole shot.
- An under propped boat will over-rev, exceeding the manufacturers recommended W.O.T. RPM range.
- If the current propeller isn't in the manufacturers suggested RPM range, select a replacement propeller based on the following guidelines:
  - o Adding one inch of pitch will reduce W.O.T RPM by 150-200 RPM
  - o Subtracting one inch of pitch will increase W.O.T RPM by 150-200 RPM

⚠CAUTION

Operating the engine outside of the recommended RPM range can cause severe damage to your engine and may void the warranty. Always test the boat on the water after you install a new propeller.

DTS versions of 4.5L/6.2L MerCruiser engines only

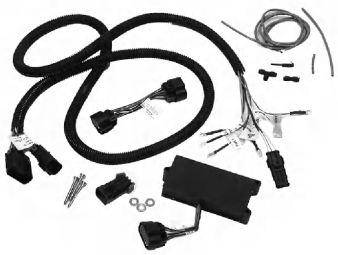
ANALOG GAUGE INTERFACE KIT



892486K08

Used on 14-pin engines to convert a digital sensor signal into analog for Tachometer, Oil Pressure/Oil Level, Water Temperature, Trim, and Fuel Level analog gauges. There is also a connection for SC100 Link Gauges.

For PCM09 ECUs - Fits SmartCraft compatible 14-pin engines

ANALOG GAUGE INTERFACE (AGI) KIT

892486K07

Includes AGI Module Assembly, Harness and hardware.
For installations using analog gauges instead of SmartCraft. Use with analog tachometer, coolant temp, oil pressure or level, trim and fuel level.

Race MerCruiser or outboard engines in single or multiple engine installations plus MerCruiser 496Mag/Mag HO engines.

Mercury Branded

ANALOG GAUGE INTERFACE (AGI) KIT

892486K04

For installations using analog gauges instead of SmartCraft. Use with analog tachometer,coolant temp, oil temp, oil pressure or fuel pressure gauges.

Race MerCruiser engines with the 14 pin Deutsch connector engine wiring harness. One AGI kit per engine required.

ANALOG GAUGE INTERFACE MODULE

892486T04

Replacement AGI Module: analog outputs for tach, fuel level, trim position, block temperature and oil pressure.

For NON-PCM09 ECUs - Must have digital sensors on SmartCraft engine in order for these to be converted to analog outputs. CDS service tool used to enable Tach Link output (which can be either digital link data or analog trim)

VESSEL ANALOG GAUGE INTERFACE (AGI) KIT

892486K05

For installations using analog gauges instead of SmartCraft. Use with analog tab position (port & starboard), fuel level (two fuel tanks) and trim position gauges.

Race MerCruiser engines with the 14 pin Deutsch connector engine wiring harness. One AGI kit per boat required.

TROLL CONTROL- DASH MOUNTED- ANALOG

87-8M0083439

Troll Control will allow you to have the same functions that you get from the SmartCraft Digital gauges and adjust the speed of the boat. By pushing the button up or down, you can feather your speed every 10 RPM. Go from idle to 1000 RPM or anywhere in between. (some engine can actually go lower than idle (75-115 4 stroke(Walleye), 135-200 HP Verado 4 cylinder and 3.0L Optimax) This kit will be used in analog gauge installations. RPM will reset to idle when more than 2-3% movement occurs at the throttle (TPS)

Can be used with any Analog Gauge installation without a J Box. "Y" harness is included in kit to connect to main engine hanress. This kit can be used with any SmartCraft compatable Mercury Engine.

CONVERSION KIT - SMARTCRAFT SENSORS

889250K01

BATTERY ISOLATORS

Multi-battery drain occurs when there are two or more batteries in a charging system. Without a battery isolator, accessories attached to one battery will draw power from all other batteries in the circuit, leaving them seriously rundown, or even dead. The Quicksilver Battery Isolator is an electric current controlling device which isolates each battery in the circuit. Each battery then discharges and charges accordingly. Never does the load on one battery drain power from other batteries in the system.

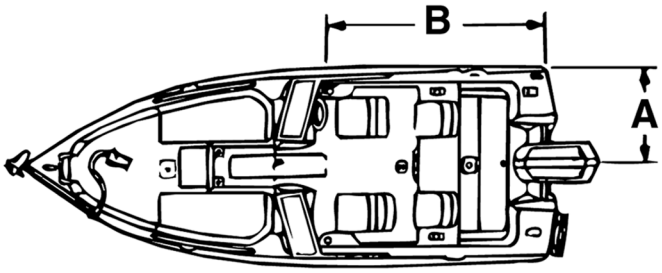
MEASURING OUTBOARD THROTTLE/SHIFT CABLES

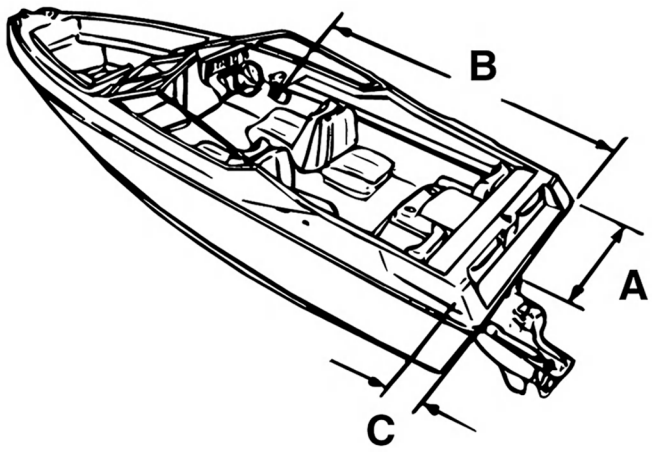
Boats with side mount controls.



1. Add boat measurements A-B in inches (mm) and add 18 in. (457 mm) to the total. Dimension B represents the distance from the remote control location measured along the gunwale to the transom.
2. In dual engine installations, dimension A is measured from the gunwale to each engine center-line.
3. Divide by 12 in. (304 mm).
4. This is the length of the throttle and shift cables in feet (meters).
5. For left hand (Port) remote control installation, use the same measuring procedure following routing along the opposite side of the boat.

MEASURING MERCRUISER THROTTLE/SHIFT CABLES

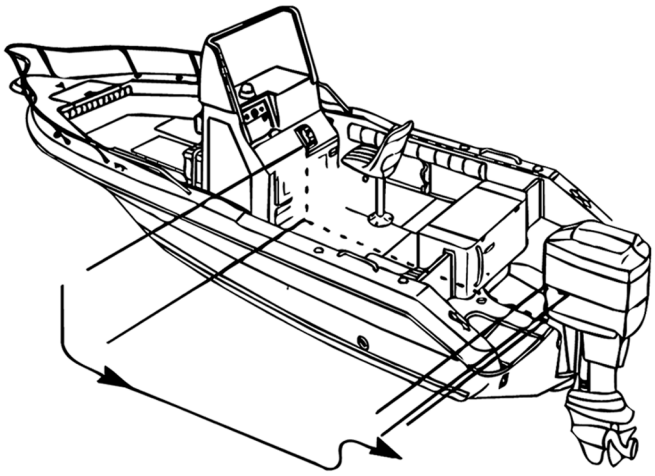
Boats with side mount controls.



1. Add A-B-C in inches (mm). Dimension B represents the distance from the remote control location measured along the gunwale to the transom. The C dimension represents distance from the transom, forward to the throttle/shift attaching point.
2. In dual engine installations, dimension A is measured from gunwale to each engine center-line.
3. Divide by 12 in. (304 mm).
4. This is the length of the throttle and shift cables in feet (meters).
5. For left hand (Port) remote control installation, use the same measuring procedure following routing along the opposite side of the boat.

MEASURING CONSOLE CONTROL THROTTLE/SHIFT CABLES

Boats with either Outboard or MerCruiser applications.



1. When measuring cable length for a console mount remote control, measure along the actual selected cable routing path and add 18 inches (457 mm) to the total.
2. Divide by 12 inches (304 mm).
3. This is the length of the throttle or shift cables in feet (meters).

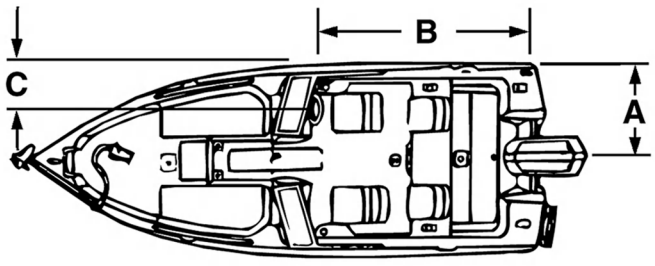
MEASURING OUTBOARD RIDEGUIDE CABLES

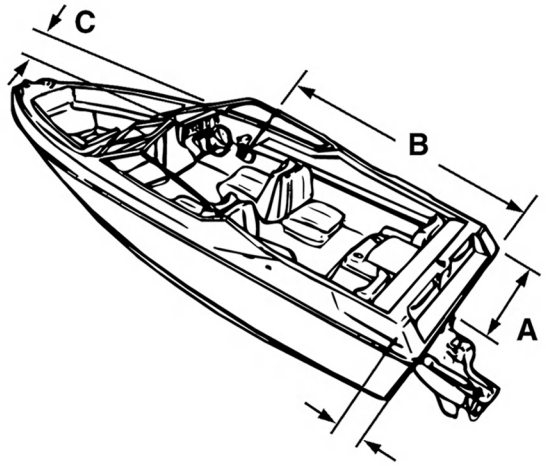
Dimensions allow for a 6 in. (152 mm) radius at the helm & an 8 in. (205 mm) radius at the transom location. Care should be taken in selection as too long or too short of a cable can both cause an increase in steering friction & shorter cable life.



1. Dimension A represents gunwale to centerline of the engine. Dimension B is gunwale length to transom. Dimension C is gunwale to centerline of helm.
2. Add boat measurements A-B-C in inches (mm) and add 6 in. (152 mm) to the total for thru tilt-tube type of steering, or subtract 6 in. (152 mm) for transom mounted steering.
3. Divide by 12 in. (304 mm).
4. This is the length of the RideGuide cable in feet (meters).
5. Round to the nearest foot (meter) allowing adjustments for variations in cable routing, freeboard drop and radii.

MEASURING MERCRUISER RIDEGUIDE CABLES

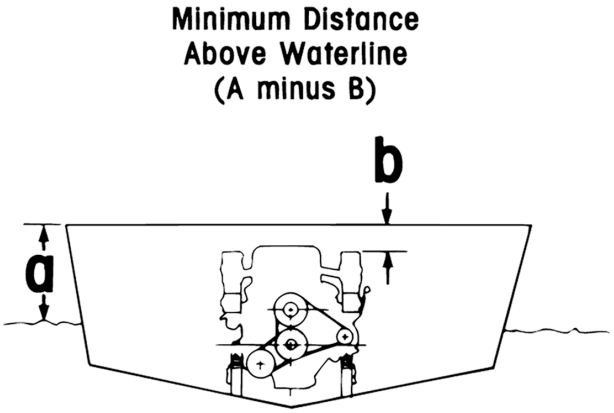
Dimensions allow for a 6 in. (152 mm) radius at the helm & an 8 in. (205 mm) radius at the transom location. Care should be taken in selection as too long or too short of a cable can both cause an increase in steering friction & shorter cable life.

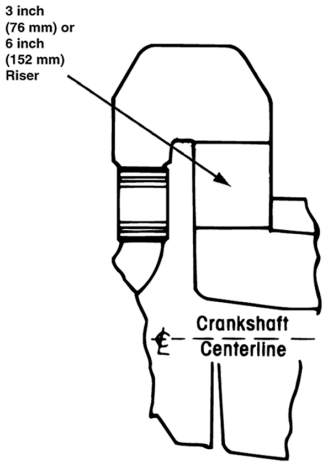


1. Dimension A represents gunwale to centerline of the engine. Dimension B is gunwale length to transom. Dimension C is gunwale to centerline of helm.
2. Add boat measurements A-B-C in inches (mm) and subtract 6 in. (152 mm) from the total.
3. Divide by 12 in. (304 mm).
4. This is the length of the RideGuide cable in feet (meters).
5. Round to the nearest foot (meter) allowing adjustments for variations in cable routing, freeboard drop and radii.

MEASURING FOR EXHAUST RISERS

The exhaust elbows must be located a sufficient distance above the waterline (at rest with maximum load) to prevent water from entering cylinders through the exhaust system. Available in both 3 in. (76 mm) or 6 in. (152 mm) sizes, risers may be selected using the required minimum distance chart found in the appropriate engine installation manual.





DUAL REMOTE OIL TANK SCHEMATIC

Two standard Mercury 3 US gal (11 L) oil tanks may be series connected as shown. The hose from tank no. 2 to tank no. 1 must not exceed 8 ft.(2.44 meters). All precautions and rules for the filling & bleeding of a single tank apply to this two-tank arrangement. No remote tank should be installed higher than the outboard pressure relief valve. Dissimilar oil levels in the tanks at start up will self adjust during running to maintain oil in primary tank #1. Oil need only be present in tank #1 to work.

Mercury Remanufacturing and ***Quicksilver Remanufacturing*** Products and Accessories
Limited Warranty U.S.A and Canada

A. ***Mercury Marine*** warrants each Remanufactured or Certified Pre-Owned product and or accessory (not those made for high performance purposes) manufactured or sold by it to be free from defects in material and workmanship; but only when the consumer sale is made in the country to which distribution is authorized by us, and then only after the pre-delivery inspection process specified by ***Mercury Marine*** is completed and documented. Serialized products must be registered.

B. The warranty shall remain in effect for a period of one year from the date of purchase. The repair or replacement of parts, or the performance of service, under this warranty, does not extend the period of this warranty beyond its original expiration date.

C. This warranty does not cover normally worn parts, adjustments, tune-ups, or damage caused by: 1) Neglect, lack of maintenance, accident, abnormal operation or improper installation or service; 2) Use of any product or accessory not manufactured or sold by us; 3) Operation with fuels, oil or lubricants which are not suitable for use with the products or accessories; 4) Participating in or preparing for racing or other competitive activity or operating with a racing type or modified lower unit; 5) Water entering engine cylinder(s) through exhaust system, carburetion, or fuel injection system; 6) Failure or damage caused by fuel deterioration or phase separation, fuel formulation, contamination, varnishing, or gumming.

D. Our obligation under the warranty is limited to repairing a defective part, or refunding purchase price, or at our option replacing such part or parts with either new or **Mercury** factory certified remanufactured parts as shall be necessary to remedy defects in materials or workmanship as covered by this warranty. We reserve the right to improve the design of any ***Mercury Remanufacturing*** or ***Quicksilver Remanufacturing*** product or accessory without assuming any obligation to modify any *Mercury* product or accessory previously remanufactured.

E. Reasonable access must be provided to the product for warranty service. Claims shall be made under this warranty by delivering the product or accessory for inspection to a Mercury Marine dealer authorized to service the Purchaser's product. If purchaser cannot deliver product or accessory to such authorized dealer, purchaser may give notice in writing to the company. We shall then arrange for the inspection and repair, provided such service is covered under this warranty. Purchaser shall pay for all related transportation charges and/or travel time. I. This warranty gives you specific legal rights, and you may also have other legal rights which vary from state to state.

ELIGIBILITY FOR LIMITED WARRANTY

Eligibility for Limited Warranty

IMPORTANT: When replacing a longblock, the following requirements must be met in order to ensure eligibility for the Mercury/ Quicksilver Remanufacturing Limited Warranty.

- ☐ If the engine is equipped with an oil cooler, the oil cooler must be replaced in order to prevent the probability of a premature internal engine failure.

  NOTE: If the cooler is not replaced, the longblock will not be eligible for warranty consideration. If an internal engine failure should occur that is eligible for warranty consideration, a copy of the invoice indicating the purchase of an original type OEM oil cooler is required.

- ☐ All oil lines and oil filter adapters must be flushed with a clean solvent to eliminate the probability of bearing damage to the engine.
- ☐ Clean the intake manifold induction runners to ensure that they are free of debris.
- ☐ Replace or clean fuel system components (carburetor or injectors) to ensure proper operation. Verify fuel system pressures to ensure proper flow.
- ☐ Clean cooling system component passages to ensure that they are free of pieces of seawater pump impellers and other types of debris. Verify the condition of the thermostat housing, and install a new thermostat.
- ☐ Inspect exhaust system components.
  - Disassemble manifolds, risers, and elbows to ensure that gasket surfaces are flat and sealable.
  - Leak-test manifolds for internal leaks.
  - Use new gaskets in reassembly.
  - Verify the integrity of exhaust shutters for sterndrive applications.
- ☐ In the dress assembly process of a longblock, use new gaskets and o-rings as required.
- ☐ Refer to the appropriate Mercury MerCruiser Service Manual for proper assembly instructions and torque specifications.
- ☐ When replacing a transmission, the transmission oil cooler must also be replaced in order to prevent the probability of a premature transmission failure.

  NOTE: A copy of the invoice for an oil cooler or transmission/cooler assembly is required for warranty authorization for the transmission. If the cooler has not been replaced, the transmission will not be eligible for warranty consideration.

- ☐ Prime the engine's oiling system before installing the distributor. Refer to **Oil System Priming for Remanufactured Engines and Longblocks**.
- ☐ Before installing the engine in the boat:
  - Connect the engine to a water supply, battery power, fuel, and 3-ft exhaust hoses (connected to the exhaust elbows).
  - Start the engine; verify oil pressure and ignition timing; examine for fuel, oil, and water leaks; and inspect for loose components.
  - Verify the engine is ready to be installed in the boat.
- ☐ After the engine is fully installed in the boat, complete the Predelivery Inspection worksheet and place a copy in the customer file and another with the invoice.

  NOTE: The Predelivery Inspection worksheet is required for warranty authorization.

CORE RETURN PROCEDURE

The continued success of any remanufacturing operation is dependant on good quality cores. Throughout this catalog there are products that require core deposits to recover badly needed cores. At Mercury Remanufacturing, we understand the time and effort required at the Dealer level to process cores. For this reason, we apply a core and container deposit only when necessary to keep production lines running and inventory available for our Dealers and Distributors to sell.

CORE DEPOSITS -
To ascertain whether a given product requires a core or container deposit, use one of the following methods:

1. From the MercNET home-page, click-on "**Availability**", input "**Item-Number**", and click-on "**Go**". The values for core/container will be displayed.
2. When placing an order through MercNET, the value for core/container will appear as separate line-items on the invoice.
3. Input the part number in the MIDAS Price Book for Parts.

PARTIAL CREDIT -
Only 50% of the Core Deposit will be returned if a Powerhead, Longblock or Transmission Core is cracked, ventilated or water ingested.

FREIGHT CHARGES -
Core return freight charges will be prepaid by Mercury Marine if the procedures are followed as written on the appropriate Core Return form.

CORE RETURN FORMS – (MercNET > Handy Tools > Forms > Sales Forms)
Use these forms to return the following cores:

90-8M0076360 for Outboard Powerheads, Verado Superchargers, ECM's and Catalyst Core.

QUICKSILVER CRATE ENGINES

QUICKSILVER has been building the 350 Crate Engines as parts for repairing boat engines since 2008. These never were converted automotive units or remanufactured, but rather built by QUICKSILVER from scratch for marine duty. CRATE ENGINES are major assemblies that include a new longblock as well as the fuel delivery and ignition components required for a high quality major repair. But, they require many more parts to be transferred from the engine being repaired or bought new before a boat can be made to go. CRATE ENGINE major assemblies lack: a cooling system, engine mounts, fuel handling system, exhaust system, couplers, control mounting points, a starter, accessory drive, alternator, seawater pump, power steering, and usually a flywheel. The offerings are now expanding beyond the familiar 350 carbureted and MPI models.

QUICKSILVER PLUS SERIES ENGINES

The PLUS-SERIES ENGINES from QUICKSILVER are 100% new construction, and contain all the parts a CRATE ENGINE lacks. These are drop-in-ready new marine engines. Based on popular MerCruiser and Mercury Remanufacturing models, these are 100% new engines that are built with marine-grade engine internals and other NEW marine components. QUICKSILVER PLUES-SERIES engines are 100% new factory engines for repowering classic boats built before 2008 in California, and prior 2010 for the other 49-states. Because these are completely new engines and not a major repair assembly, the old engine being replaced is to be returned per EPA 1068.240.

Since the focus of PLUS-SERIES ENGINES is repower, many parts included in new MerCruiser engines used for new boat construction are not included. Parts such as: transoms, trim pumps, Y-Pipes, rigging, props, boat harnesses, riser kits, closed cooling kits, steering cylinders, lubes, and many other parts required for a successful repower must all be purchased separately.

PLUS-SERIES ENGINES

The PLUS-SERIES line from Mercury Remanufacturing is made up of unique engines that offer value performance for your next repower. Based on our popular MerCruiser products, these are fully remanufactured engines that are fitted with marine-grade performance valve train, pistons, induction system and (in some cases) marine headers to deliver factory reliability at an affordable price.

Each PLUS-SERIES engine is "Hot Tested" by supplying fuel and coolant so technicians can perform a series of live-running tests for quality assurance. All PLUS-SERIES engines are completely remanufactured and include exhaust manifolds, fuel, electrical and ignition systems so they are ready to rig into a boat.

PLUS-SERIES engines from Mercury Remanufacturing come with a One-Year Factory Limited Warranty. Mercury Product Protection is available to provide up to two-years of additional coverage.

CONSIDERATIONS FOR THE 4.3L, 5.7L and 350 Gen+ PARTIALLY DRESSED ENGINES:

- To avoid the expense of a fully-dressed complete engine, the following items (if in good condition) need to be transferred from the original engine over to the replacement engine: exhaust manifolds, risers, starter motor, alternator, pulleys hoses and belts.
- Installing a partially dressed engine into a 1981 or earlier application would not be recommended. Due to the shift bracket that contains a reverse lock mechanism, it would be extremely difficult and expensive to accomplish this upgrade.

This product category may require a Core/Container Deposit.

DARE TO COMPARE

MERCURY Remanufacturing

DARE TO COMPARE?

When evaluating the features and benefits of any product it is human nature to put price at the top of the consideration list. Here, at ***Mercury Remanufacturing*** we do to. However, it is our obligation to provide a product that will withstand the rigors of marine use and live-up to the expectations of the customer. With that being said, we are willing to share the very essence of the value we put into each and every engine.

THE PARTS

When searching for a replacement engine, marine dealers sometimes turn to their local machine shop to rebuild a marine engine. Most of these local shops are accustomed to building automotive type engines that utilize components that are lower in price but not suitable for the demands of a marine environment. This results in an engine that may be lower in price but not built to the same quality standards as a Mercury Marine remanufactured engine.

The table below shows the retail prices obtained from a national competitive auto parts chain. Here we compare the high-quality marine parts utilized by *Mercury Remanufacturing* and the same parts that would normally be used to rebuild an automotive engine. A 1995 5.7L V-8 was used for this example.

NOTES AND PROCESS

NOTES

1. Most machine shops grind the valves, they don't replace them. At *Mercury Remanufacturing,* we replace all the valves - 100%.
2. Most machine shops don't replace the valve springs. Automotive valve springs are not suitable for constant high RPM operation. Again, we replace every valve spring and lock.
3. Some machine shops don't replace the oil pump. Here, all oil pumps are replaced with brand new "high-volume" pumps to make sure the engine receives the best possible interior lubrication.
4. Most machine shops reuse all of the fasteners. At *Mercury Remanufacturing,* we replace all critical fasteners.

Interesting Observation:

In the remanufacturing process, additional parts are used to build the total engine. As the previous parts comparison shows, if a local machine/repair shop were to use the same quality parts as Mercury Remanufacturing, the cost of their engines would be **$834.37 higher** than the average rebuild price.

THE PROCESS

Remanufacturing an engine to Mercury Marine's standards requires a significant investment in specialized equipment, documented process systems, and properly trained employees to consistently bore, hone, machine, clean, assemble, paint, and live-run every engine to provide the quality expected of an original equipment manufacturer. Local machine shops rarely have the necessary equipment or process systems in place to remanufacture a marine engine to this level of quality. These important differences are often overlooked or unknown when comparing engine prices.

Teardown – Cleaning – Inspection:

- Each core engine is completely disassembled, then baked in an oven to burn off the oil, grease and corrosion.
- Next, the castings go through a "hot" high pressure wash to clean the material to a like-new condition. Older methods of shot or bead blasting are no longer utilized as part of the cleaning process, primarily to reduce the possibility of metal debris adhering to the block.
- Then, every component is inspected for cracks and erosion. Cracked or damaged crankshafts, blocks or heads are scrapped, not welded or repaired!
- Each engine goes through a total of four washing procedures throughout the engine-building process.

Machining Blocks:

- Each block is bored to a maximum of 40 thousandths oversize and honed to OEM specifications.
- The deck is machined to ensure a flat sealing surface.
- Crankshaft mains are line-honed.
- Cam bores are also line-honed to eliminate bearing distortion. This important step is often avoided by other engine remanufacturers due to equipment cost and process time.

Cylinder Heads:

- The head surface is machined to ensure a flat sealing surface.
- Hardened exhaust seats are replaced as required and all seats are three-angle ground.
- Valve guides are machined to accept an oversize valve stem. This is a critical process to eliminate stem-to-guide leakage. In an attempt to reduce cost, most competitors and machine shops knurl the valve guides which by Mercury's standards is an unacceptable process. Knurled guides wear quickly and lead to oil consumption and poor performance.

Crankshafts:

- All crankshafts are ground to a maximum of .020 undersize. Crankshafts are never welded to repair damage, they are scrapped.

Connecting Rods:

- All rods are checked for straightness and twist.
- All pin and bearing bores are honed

COMPONENTS AND ASSEMBLY

COMPONENTS

- Components are stored on plastic covered racks and containers protected from airborne contamination.
- All purchased components are inspected for contamination and washed prior to assembly. This cleaning process rarely found at any competitor or machine shop.
- All machined components also receive a final wash prior to assembly.

ASSEMBLY

The Environment

- The engine assembly area is located in a separate room away from the machining room. This separation and filtered air circulation reduces the possibility of airborne contamination during the assembly process.

Brass Freeze Plugs

- New brass freeze plugs are installed in the block with a special hydraulic press so that the plugs seat perfectly in the block.

Crankshaft Installation

- The main bearing caps are torqued with a programmed air tool that tightens all bolts on each cap at the same. This is a critical process since it applies equal torque to both sides of the bearing at the same time.
- Both rod bearing studs are also tightened at the same time, to the maximum torque specified.
- The air tool also applies a paint dot to each bolt so it identifies that the part was correctly installed.

Inspection

- During the assembly process blocks are randomly selected to inspect for particulate contamination.
- The block and components are washed and the rinse solution is inspected for contaminant particle count. Complete batches of engines may be rejected if the particle count is beyond acceptable limits.
- Blocks, heads and crankshafts are randomly selected for measurement. The components are place on a computer controlled fixture and automatically measured to ensure that each part meets the OEM specification. A coordinate measuring machine (CMM) accurately measures every dimension and then compares it to the OEM specification.

Final Assembly

- All stages of the final assembly are closely monitored so each engine meets the strict quality standards.
- Each station is equipped with a complete set of documents describing each operation.
- The platforms that carry each engine during assembly are washed after each engine is completed.
- Automated tools are recalibrated regularly and tested to provide accurate installation.

Final Testing

- Every Mercury Marine remanufactured engine is **HOT TESTED** prior to shipment.
- Each engine is fully assembled with a fuel and electrical system. This process is costly and time consuming, but ensures that each engine actually operates properly.
- The engine is placed in a test stand and run up to operating temperature, allowing the gaskets and fasteners to properly seat.
- Oil pressure and flow is checked and documented.
- Each cylinder is compression tested.
- The cooling system is pressurized to operating pressure. Special lighting and a dye is used to check for coolant leaks.
- For future reference computer records are maintained for each engine.

HOT-TEST VS. SPIN-TEST

The value of a HOT-TEST vs. SPIN-TEST!

The majority of engine rebuilders utilize a spin-test to evaluate the quality of their engines. A spin-test simply rotates a cold engine (by the crankshaft) at or near idle speed to check oil pressure and look for gasket leaks. The process is fast and simple, but it lacks several other important aspects of determining engine quality. By running the engine "live," we are certain that the coolant is flowing properly through the block and oil is getting up to the bearings, rocker-arms, and camshaft. Experience has taught us that gaskets will not show evidence of leaking until the engine is up to full operating temperature. A spin-test will not raise the oil temperature high enough to truly determine if the gaskets and seals are doing the job. The majority of local machine shops are not equipped to perform either test.

Like high performance race-engine builders, we perform a hot-test on each and every remanufactured engine to assure the installer and the boat owner that the replacement engine they have selected will be a dependable performer. Very few remanufacturing operations have the ability to actually Hot-Test a longblock engine assembly, but we do!!

At ***MERCURY REMANUFACTURING*** we are proud to be one of the few!

ENGINE IDENTIFICATION SHEET

4.3L ENGINE IDENTIFICATION

MERCURY Remanufacturing

"Identification Tips" for MerCruiser 4.3L Longblocks

1986 – 1992 14149R5

Non-balance shaft, with a mechanical fuel pump, a roller camshaft, and one piece rear seal.

A. Easily identified by metal 10 bolt short front cover similar to 5.7L.
B. Some non-balance shaft engines were produced without a manual fuel pump. This engine will fit either application with a fuel pump cover if manual fuel pump is not needed.
C. All 12 intake manifold bolts are at 90 degree angle to cylinder head machined surface.

1993– 1995 806347R5

Balance shaft, no mechanical fuel pump, roller camshaft one piece rear seal.

A. Easily identified by tall metal 10 bolt front cover different from 5.7L.
B. All 12 intake manifold bolts are at 90 degree angle to cylinder head machined surface.

1996– 1998 807736R5

Balance shaft, no mechanical fuel pump, roller camshaft, one piece rear seal, "Vortec" cylinder heads with rocker ball & stud valve train.

A. "Vortec" heads are easily identified. Only 2 bolts per corner on intake manifold. (8-total).
B. The older crankshafts rear-flange are **0.123" longer**, and have a small pilot bushing hole on the back side.
C. Plastic 6 bolt front cover.

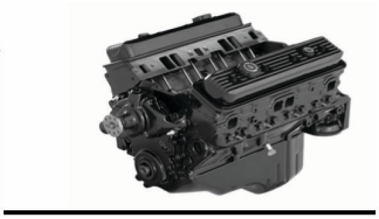
1999– 2002 864256R05 (MPI) or 862757R01 (Carb/TBI)

Balance shaft, no mechanical fuel pump, roller camshaft, one piece rear seal, "Vortec" cylinder heads with roller rocker arm valve train.

A. "Vortec" heads are easily identified. Only 2 bolts per corner of intake manifold. (8-total).
B. The cylinder head actually went to the "roller rocker arm" in 2000. Quicksilver Remanufacturing has elected to change coverage to coincide with the 1998/1999 crankshaft change as the customer would have to change flywheels to coincide with the crankshaft used. The 1999 customers will actually get a product improvement with the roller rocker arms and will not have to make any changes to their current parts.
C. The crankshaft has a **0.123" shorter** rear flange and larger pilot bushing than previous versions.
D. Plastic 6 bolt front cover.

5.0 / 5.7L ENGINE IDENTIFICATION

MERCURY Remanufacturing



"Identification Tips" for MerCruiser 5.0L & 5.7L Longblocks

Over the years there have been several changes to the GM 5.0-Liter and 5.7-Liter engine blocks. Often making it difficult to positively identify which version a technician is working on, and the appropriate parts required too complete any necessary repairs. Hopefully, this will help to take some of the mystery out of the identification process.

1986 & Earlier

A. All 12 of the intake manifold bolts are installed at a 90-degree angle to the block.
B. The valve cover bolts are installed at the perimeter of the head.
C. Crankshafts utilize a 2-piece rear-main seal.
D. These blocks are machined to operate a mechanical fuel pump.

Note: In 1986 there was a limited production run with a one-piece rear-main seal, perimeter valve-cover bolts, and 90-degree bolt pattern for the intake manifold.

1987 thru 1995

A. 8 of the 12 intake manifold bolts are installed at a 90-degree angle to the block. The other 4 bolts are installed at a 72-degree angle.
B. The valve cover bolts are installed in the center of the head.
C. Crankshafts utilize a 1-piece rear-main seal.
D. These blocks are machined to operate a mechanical fuel pump.

Note: During 1996 and 1997 the 350-Magnum (carb) and a limited production of the 5.7-Liter EFI throttle body utilized this (non-Gen+) designed roller-cam engine.

1996 & Newer (Gen+)

A. All 8 intake manifold bolts are installed vertically. (Straight-up and down)
See MerCruiser Service Bulletin # 97-1 for proper torque procedures and specification.
B. The valve cover bolts are installed in the center of the head.
C. Crankshafts utilize a 1-piece rear-main seal.
D. Timing covers are plastic.
E. Engines are fit with electric fuel pumps.

Note 1: During 1996 and 1997 the 350-Magnum (carb) and a limited production of the 5.7- Liter EFI throttle body utilized the 1987 thru 1995 engine block as stated above.

Note 2: During 1996 the 5.7-Liter MPI (multi-port fuel injected) engines were produced with a vapor separator and a mechanical fuel pump. For these applications we recommend installing a ***MERCURY*** Pro-Series longblock # **860186R 5**.

OIL PRIMING INSTRUCTIONS

MERCURY Remanufacturing

Oil System Priming for Remanufactured Engines and Longblocks

All MerCruiser remanufactured 4-cycle engines and longblocks are temporarily fit with electrical, cooling, and fuel systems to perform a series of "Hot-Test" validations for quality control purposes. After the tests, the engine oil drains back into the pan and loses its lubrication value for the bearings, valve-train, and cylinder walls. As shipped, the remanufactured engine or longblock is therefore presumed to be dry.

IMPORTANT: This oil priming procedure is required for all remanufactured engines (including longblocks) prior to initial engine start-up to reduce the potential for premature bearing failures. Evidence of non-compliance could result in the denial of a warranty claim.

There are two methods to prime an engine prior to ignition. Although one is preferred, either may be used.

1. Prime using an engine oil priming tool (available at automotive parts stores; obtain locally). This is the preferred method.
2. Prime using a remote starter switch.

Remote Starter Switch	91- 52024A 1

Using an Engine Oil Priming Tool

1. Fill the engine crankcase to the proper level with the recommended synthetic blend engine oil.

Qty.	Description	Part Number
AR	Synthetic Blend MerCruiser Engine Oil, FC-W Certified, SAE 25W40	858055K01

2. Remove the complete distributor assembly, being certain to mark it for proper reinstallation. Refer to the applicable MerCruiser Service Manual for details.
3. Install the oil priming tool into the distributor bore and onto the oil pump shaft.
4. Rotate the oil pump with an electric drill until oil pressure registers on an oil pressure gauge. Oil pressure will typically register within two minutes of running the drill.
5. Remove the priming tool and reinstall the distributor according to instructions provided in the applicable MerCruiser Service Manual.

Using a Remote Starter Switch

1. Fill the engine crankcase to the proper level with the recommended synthetic blend engine oil.

Qty.	Description	Part Number
AR	Synthetic Blend MerCruiser Engine Oil, FC-W Certified, SAE 25W40	858055K01

2. Remove all spark plugs.

   NOTE: Tag spark plug wires with temporary labels, as necessary to ensure that they are reconnected correctly.
3. Disconnect the coil wire from the distributor and connect it to a good ground.
   IMPORTANT: Ensure that the ignition key is in the OFF position.
4. Connect the remote starter switch to the large, 12 V terminal (typically a red battery cable) and the small terminal (yellow/red cable) on the starter motor.
   IMPORTANT: It is possible to perform this procedure using the boat's key switch instead of a remote starter switch. Should you choose this option, make certain that you disconnect the purple wire from the coil before turning the key. Protect the purple wire's connector with electrical tape to avoid accidentally grounding the wire.
5. Prime the oil pump and passages:
   a. Crank the engine for approximately 15-18 seconds.
   b. Let the starter motor cool down for one minute before cycling again.
   c. Repeat this process until oil pressure registers on an oil pressure gauge. Oil pressure will typically register within six or seven cycles of cranking and cooling the starter motor.
6. Remove the remote starter switch (or reconnect the purple wire to the ignition coil, if using the boat's key switch).
7. Install the spark plugs and plug wires.

   NOTE: Ensure that all plug wires are connected to the proper cylinders and that they are correctly routed. Remove any temporary labels.
8. Supply the seawater pump with cooling water.
9. Start the engine to verify oil pressure.

ENGINE BREAK-IN PROCEDURES

MERCURY Remanufacturing

"Break-In" Procedures for 4-cycle MerCruiser Engines

IMPORTANT: The first 20-hours of operation will have a dramatic affect relative to overall engine performance and expected engine life. Proper break-in practices reduce the potential for excessive oil consumption. It also helps to achieve better engine performance levels for a longer period of time.

FIRST 20-HOURS:

1. Do **NOT** operate the engine below 1500 rpm for extended periods of time. Shift into gear as soon as possible after starting the engine. Advance the throttle above 1500 rpm **if conditions permit safe operation.**

2. Do **NOT** operate at one continuous speed for extended periods of time. Vary the throttle position every ten to fifteen minutes.

3. Do **NOT** exceed ¾ throttle during the first 10 hours of operation. During the next 10 hours you may occasionally operate at full throttle for no more than 5-minutes as a time.

4. Do **NOT** operate at full throttle until the engine reaches normal operating temperatures.

5. Avoid full throttle acceleration from an IDLE speed.

AFTER FIRST 20-HOURS:

To help extend the engine life for a remanufactured MerCruiser engine, consider the following recommendations.

1. Install and maintain the correct propeller for the application. Make sure the prop allows the engine to operate at (or near) the top of its specified Wide-Open-Throttle rpm range. Refer to the Owner's Manual, or consult with your marine dealer to determine the correct prop for the application.

2. Refrain from extended periods of Wide-Open-Throttle. We recommend cruising at ¾ throttle or below for longer term operation.

3. Change the oil and filter regularly. Refer to the Specifications and Maintenance section of the MerCruiser Owners Guide for recommendations.

BLOW START SIPHON

BLOW-START SIPHON

91-827497A 1

The ruggedly constructed siphon is a quick and convenient way to transfer fuel from a gas can to a fuel tank. The siphon flows approximately five gallons of fuel per minute. Siphoning is started by blowing air into a blow-tube. Even better, it eliminates the old "fuel-in-the-mouth" possibility and stores easily. The siphon is very useful in areas where boat fuel is no longer available at the dock.

CORROSION PROTECTION

GALVANIC ISOLATOR KIT

Galvantically isolates a boat from all metals ashore as well as from other boats that are plugged into the same shore power circuit. The Galvanic Isolator is rated up to 60 amps capable of handing two 30 amp shore power circuits. The Monitor continually monitors the Galvanic Isolator, boat wiring and shore power wiring for faults. The Display provides both an audible and visual alarm if fault is detected. An added feature of the Monitor and Display is corrosion protection by supplying impressed current into the water, similar to the MerCathode system.

(1) No Kit Available

(2) This closed cooling kit will not fit 3.0L engines with optional side mounts

(4) The ECM must be replaced when installing a closed cooling kit on this specific engine application. Due to the many updates throughout the year, the ECM listed may not be the appropriate ECM for your engine serial number. Please check the latest Electronic Parts Catalog

(5) Note the additional required kit(s) listed to complete the installation.

(6) Thru hull water pickup is not included with seawater pump kits. Obtain locally.

(7) 865188T01 Front Lift Bracket: Order this replacement bracket if the engine s/n is 0M600000-0M616622 or if a Bravo engine with an air actuated drain system.

(8) This hose kit required only if engine has 6 in. (152 mm) exhaust risers.

(9) Bravo drive applications require the installation of an additional thru-hull or transom mounted water pickup along with the drive unit water pickups. Order these components separately.

(10) This hose kit required only if engine has in-line transmission and 6 in. (152 mm) exhaust risers.

(11) If engine is equipped with 6 in. risers, also order Hose Kit 32-865998A01

(12) Emission Controlled engine

(13) This closed cooling kit will fit Alpha engines with the standard single point drain that incorporates the rod actuated water distribution housing only, and will NOT fit Alpha engines with the special single point drain tee fitting 22-8M2020634 with the blue drain plug which was required in some boats due to the hull design.

(14) Hose kit 32-865039A02 is also required for Axius EC engines

(15) If engine is equipped with risers, 1 of the following hose kits is also required to be ordered separately. Order 32-8M0051174 for engines with 2 in. risers. Order 32-8M0051175 for engines with 4 in. risers. Order 32-8M0051176 for engines with 6 in. risers.

(16) If this kit is being mounted on a 4.3L Alpha engine, also order serpentine belt 57-865615Q03

(17) This air actuated seawater pump rear cover is required to be ordered separately for Bravo applications.

(18) This hose kit only required if engine is equipped with 4.7 in. (119 mm) or 6 in. (152 mm) risers

(19) Alpha models also required a Water Block Off Kit p/n 8M0060840 to be ordered separately

(20) This kit will only fit 6.2L V-Drive Towsport models with DTS. Will not fit V-Drive models with mechanical throttle.
